

Industrial handling of **heavy loads**

ACIMEX

45 years of experience & innovation

ACIMEX IS THE LEADER IN THE DOMAIN OF INDUSTRIAL GRIPPING AND LIFTING OF LARGE AND HEAVY LOADS AND PIECES. THE COMPANY DESIGNS AND MANUFACTURES VACUUM DEVICES FOR THE HANDLING OF CONCRETE, STEEL OR PVC PIECES AND LARGE SCALE TUBES AND PIPES.

- Customized high-quality solutions for every client
- Lifting and handling up to 30 tons in full safety
- Products resistant to extreme conditions on hostile grounds
- Turnkey solutions for the creation of complete handling lines
- Setup of automated units for various processes

ACIMEX provides unique solutions for unique projects.

Cutting-edge technology

ACIMEX uses different types of technology to achieve the solutions it provides its clients with:

- **Vacuum technology**
A powerful handling system which generates productivity gain, stronger safety and ease of use for large-scale or delicate products.
- **Electric handling / Hydraulic handling devices**
Depending on the type of project, specially-developed clamps may be used to efficiently lift the clients' products.

Wide areas of expertise

ACIMEX offers handling equipment and vacuum devices for all domains.

Energy Pipelines and wind turbines

Handling a long tube in a harbour or on a pipeline building site becomes easy owing to the vacuum handling devices, fitted with rubber suction pads. They allow careful handling without any surface damages.

Vacuum system for pipe

Metallurgy & Aerospace Heavy and light steel sheets

However light or heavy the metal sheet is, the vacuum beam lifts and carries it away to its final destination, while respecting the integrity of often-expensive products.

Vacuum beam for aluminium plate application

Construction Concrete pieces

Moving, turning and tilting precast concrete pieces is one of ACIMEX's main fields of expertise. Its products are particularly adapted to the public construction sector.

Demoulding turning beam

Tunnel Tunnel segments

ACIMEX's expertise in this domain dates back to 20 years, during which it has designed more than 500 vacuum devices for the handling of tunnel segments and for tunnel boring machines of all diameters.

Self-powered hydraulic clamp

Sold in 2015

12 Starlift | 14 Handling clamps | 16 TBMs equipped

ABOUT THE COMPANY

Created in 1971, ACIMEX acquired its fame in the domain of gripping and lifting of steel and sheet plates, mainly serving the iron, steel and mechanical engineering industries. The company soon extended its knowledge to the concrete and pipe handling a few years later. CBE Group, worldwide key player in the production of tunnel segment moulds, purchased ACIMEX in 2009 to provide its clients with a global offer.

2012 – 2015

298 projects | 15 countries
